

1669.

Apollo Anglicanus:

THE ENGLISH APOLLO:

Astronomically observing, and
Astrologically demonstrating, those
grand Catastrophes, and superlative
Actions designed by the Heavens
to be manifested in the World
this present Revolution.

With necessary Tables plain and useful.

A twofold Kalender, viz. Julian or English,
Gregorian or Forain Computations, more plain and
full than any other; with the Sun and Moons
Risings, and Settings, dayly observ'd.

Being the first after Bissextile or Leap-year.

A new way (never Printed before) to Calculate with
ease the motions of the Planets, for any time past or to come.

By RICHARD SAUNDERS
Student in Astrology and Physick.

*Cognosce alia, ut te cognoscas; cognosce teipsum, ut cog-
noscas Deum.*

LONDON, Printed by E. Cotes, for the
Company of Stationers, M. DC. LXIX.

A Table shewing how many years **Purchase** a **Lease** or **Annuity**, to endure for any **Term** of years under 33. is worth presently at **Interest** upon **Interest**, at six in the hundred: and shewing plainly how to **discount** any **Lease** in **Being**, and the true value of the **Reversion** after any number of **Years**.

| Year of a Lease. | | | | The use and Explanation of this Table. | | | | Year of a Lease. | | | |
|------------------|---------|------|------|--|--|--|--|------------------|---------|------|------|
| Years. | Months. | dec. | par. | The first Column towards the left hand, sheweth the yeares of a Lease or Annuity, and right against each Yeare, is the Years Months and Decimal parts of a Moneths purchase, that such a Lease or Annuity is worth. | | | | Years. | Months. | dec. | par. |
| 1 | 0 | 11 | 0 | <i>Example.</i> Suppose a Lease or Annuity to continuen Yeares, and you would know how many yeares purchase it is worth in present money, look in the Table for ten yeares of a Lease to the left hand, and against the same you shall find 7,4,3 which sheweth such a Lease to be worth seven yeares four months, and three tenth Parts of a Moneths purchase. | | | | 17 | 10 | 5 | 8 |
| 2 | 1 | 9 | 9 | | | | | 18 | 10 | 9 | 9 |
| 3 | 2 | 8 | 1 | | | | | 19 | 11 | 1 | 3 |
| 4 | 3 | 5 | 9 | <i>Again, are you to take or</i> | | | | 20 | 11 | 5 | 7 |
| 5 | 4 | 2 | 5 | | | | | 21 | 11 | 9 | 3 |
| 6 | 4 | 11 | 0 | | | | | 22 | 12 | 0 | 5 |
| 7 | 5 | 7 | 0 | buy the Reversion of any Lease or Annuity, work thus, Suppose the Lease to be thirty yeares in all; you find in the second Table, and right hand against thirty, 13 yeares 9 months, and two tenth Parts of a moneths purchase; this it were worth, were it in present possession. But suppose there be a Lease of five yeares (more or less) before your Commence; look in the Table against the five Yeares, and there you find four Yeares, two Moneths, five tenth parts, halfe a Moneths purchase; take this out of the sum against thirty, which is 13,9,2. 4,2,5. The remainder is 9. yeares six moneths, seven tenth parts of a month; and so much is the Reversion after five yeares worth, the remainder of thirty yeares. This is usefull and very easie. | | | | 23 | 12 | 3 | 6 |
| 8 | 6 | 2 | 5 | | | | | 24 | 12 | 6 | 6 |
| 9 | 6 | 9 | 6 | | | | | 25 | 12 | 9 | 4 |
| 10 | 7 | 4 | 3 | | | | | 26 | 13 | 0 | 0 |

This Table tells us of our Cæsars Birth,
 When 'gan to Reign, how long they sway'd on Earth
 In Pageant glories, real cares and pains,
 And last recounts the end of all their Reigns.
 Conclude in Dust, oh sad! What's learned here?
 But Dive remembrances that once they were:
 Of Twenty six, doth only one remain,
 Whom God preserve, grant long and prosperous Reign.

Forewarn'd, forearm'd, the Terms approach you see;
No Musick's sweet, like Angels Harmonie.

Hilary-Term begins Jan. 23. and ends Feb. 12.

| Return or Effoin days. | Exception days. | Returna bre- vium. | Days of Ap- pearance. |
|----------------------------|--------------------|-----------------------|--------------------------|

| <i>Quin. Mar. Nov. 25</i> | <i>November 26</i> | <i>November 27</i> | <i>November 28</i> |

Note, The Exchequer opens eight days before any Term begins, except Trinity Term, before which it opens only four days.

Note, That the first and last dayes of every Term, are the first and last dayes of Appearance.

Directions for the subsequent Diary, or Almanack.

1. In the first column to the left hand, on the left hand page, you have the Numerall figures of the days of the Month.
2. In the second column you have the week days, and Dominical Letter.
3. You have all the principal and observable Saints days and others; the places of the Planets, and the Moon most nights, with what fixed Stars she is with, is observed; by which the Asterisms and constellations are easily known to an ingenious eye and understanding.
4. The Moons place in the Zodiack every day at noon.
5. The age of the Moon, by which the Tides are known.
6. The rising or setting of the Moon, every day in the year.
7. The general state of the weather, with much care performed by the Author.
8. In the 8. column, the first on the right hand, you have the English account, In the 9. the Forain. In the 10. the Roman week days, and Sunday Letter.
11. The perfect Roman Kalender and Saints days.
- 12, 13, and 14, the utmost to the right hand, you have the layly rising and setting of the Sun, with the Aspects.

A Table to find when the Moon will be full South every day this year, whereby the time of Tides is exactly known.

M. A. H. b. f.

First find her age in the 5. column of the Almanack, which is exactly every day noted; which age seek out in one of the two columns of this Table to the left hand, against which in the third and fourth columns is the hour and minutes which shew the time of the Moons being South.

As for Example, the 11 day of March the Moon is 19 days old, which being found in a column of this Table against 4, to the right hand it points to 3 h. 12 m. at which time the Moon is South the said 11 day of March, 1669. *Et sic de ceteris.*

Here note, that all the increase she cometh to the South in the evening following the Sun; but in the decrease, in the morning going before the Sun.

By any Sun-diall you may know the hour of night by adding to the time of the Moon being South after, or subtracting before.

| | | | |
|----|----|----|----|
| 1 | 16 | 12 | 48 |
| 2 | 17 | 1 | 26 |
| 3 | 18 | 2 | 14 |

| 16 | 31 | 1 | 48 |

To find the time of high water in most Coasts of England.
First, as you before were taught, find at what time the Moon will be South, for then you may truly conclude it High-water at Southampton, Quinborough, and Portsmouth, for there the South and North Moons make a High-water. But when you desire the time of Full Sea in any of the following Coasts in the ensuing Table, find the name of the place, and see how many hours and minutes be annexed thereunto in the column under H.M. which added to the time of the Moons coming to South, gives you the time of High-water for the place required.

A Tide-Table, with the Names of the Havens.

| | |
|--------------------------------------|-------|
| R ochester, Maldon, Aberdeen, | 0 45 |
| Gravesend, Romney, Ramkins, | 1 30 |
| London, Tinnmouth, Haylepoole, | 3 0 |
| Frieth, Leith, Dunbar, Narbon, | 4 30 |
| Newcastle, Falmouth, Humber, | 5 15 |
| Lin, Antwerp, Plimouth, Hull, | 6 0 |
| Bristol, Lanion, Foulness, | 6 45 |
| Milford, Bridgewater, North-coast, | 7 30 |
| Portland, Peterport, Hartflew, | 8 15 |
| Dover, Yarmouth, Harwich, Dublin, | 10 30 |
| Calice, Rye, Winchelsey, Calshot. | 11 15 |

Example.

THE 11 of March this year, it is required to know the time of full Sea at New-castle: by the Kalender over against the 11 of March, in the fifth Column, I find the Moon nineteen days old, and by the foregoing Souching-Table, I find the Moon South at 3 hours 12 minutes in the morning; then in the preceding Table, against Newcastle I find 5 hours 15 minutes, which added to 3 hours 12 minutes, the aggregate is 8 hours 27 minutes, wherefore I conclude it High-water there at 8 hours 27 minutes in the morning: so of any other.

Take notice that the Tide floweth one point of the Compass more at the Spring-Tide (which is the New and Full Moons) then at the Neap-Tides (the first and second Quarters) as also the latitude of the Moon, and Winds, may alter it an hour sooner or later; let it be their providence who depend upon the Tides, to make timely provision.

*The Tides like tymons Numers never rest,
 Still constant in unconstandy at best.*

A true Chronology of memorable things in this year, 1669.

A NEW and READY way, to calculate
the Motions of the PLANETS for
any time, past or to come.

NO subject in the Universe wants its History, as Astronomy and Astrology, (a thing justly complain'd of) for till of late times: we have little *Cronology*, or to little purpose, of any those glorious *Phænomena's*, *Actions*, and *Passions* of the Planets *Conjunctions*, *Eclipses*, ordinary or extraordinary Appearances of *Stars* or *Comets*, or of any the wonderful powers and irradiations in the Heavens, and their effects, formerly pour'd forth upon the sublunary world: no subject of Learning hath been so little remembred to posterity, as this, which makes our present times to languish in many Doubtful dissatisfactions, about the Verity, Nature, and Scope of Cœlestial operations: Not by reason the Antients put any disrepute upon this Science: for those dark footsteps, by which they are traced down to our times, do sufficiently evince, that they did fully own *Plato's* Maxim, *Nil est inferius, Quod non est superius*. That all sublunary subjects had their union, with their increase, decrease, conservation, and confusion from the heavenly influences, as natural causes producing such or such effects: as also upon the Actions and designations of men, influentially operating on the humours, and thereby inclining the will to this or that, so by consequence powerfully disposing much of humane Actions in the Lives of men, which the learned *Kepler* (in effect) modestly acknowledgeth, saying, *Neque enim agunt stellæ in fortunam Hominis, quasi foris extrinsecus amentis Humana coeuntes ad consultandum, sed animus est ipse quicum positu Astrorum harmonico conspirans, occasionebus inhiat, ingeniaque suscipit*; whether the minde incline to the stars, or the stars incline the minde (being all one in effect) we shall own his testimony (but not to stray,) I say, a very little portion of this sublime knowledg (of preceding Actions, hath been yet communicated to the world)

C

either

A Prognostication.

either through the Negligence of our forefathers, minding (like Moles) things *sub pedibus*, supinely alighting the Caelestial glorious fabrick of the Heavens, or through the envious Policy of the self ended Monk (Popery and blindness for so many years overspreading the face of this Western world) who would allow no Learning, but what went through their own fingers (having power to obstruct all other) lest their Villanies should thereby have been discovered, as questionless *Astrology* would have done. This may be supposed the prime cause why the paths of this Learning are so dark and obscure in our daies, they maliciously obliterating, suppressing, and confounding the same accounting it, on no other ground unlawful, but because their unlawful Actions should be thought lawful, this their self ended malice hath brought a Deluge of Inconveniencies into the world. How had this Noble Science of *Astrology* and *Astronomy* flourished by this time? Had we had the Histories of preceeding Ages conveyed down to us, by them who had observed their powerful and necessary operations on sublunary bodies? but in brief, this being lost, or much obscured, It's very necessary that we look back to those grand Actions fore-passed in the world. *Chronology* holds forth to us, to examine upon diligent search to finde out the natural Causes; by which we shal be the more able to give reasons for future operations and Prognosticks, but it will be Answered, *His labor, hoc opus est*. It's an Herculean Labour, and scarce an *Atlas* can bear that burthen. Wanting Ephemerides, and necessary helps of Discovery for those Antient times, my self having spent many pensive thoughts under the sence of this want, and earnestly wishing a supply herein: having through much desire and the helpful assistance of a worthy person (not vulgarly eminent) At last arrived to a mean of satisfaction, and a method, by which, with the help onely of any old or present Ephemeris, we may come to know the Positions of the Heavens readily for any time past, or to come.

come, without any material sensible error, hereby
may be searcht out the Causes of those many Catastro-
phes, and various changes acted on the Theatre of this
world in preceeding Ages, to the farther Inlightning
and building up of Art for the time to come. I being
much delighted with this Discovery, knowing, *Non*
nam nasci sumus, partim patria, partim Amici vendicant;
freely and willingly impart it to the ingenious Rea-
ders, those good Natures: who are the true Legiti-
mate sons of Art, as briefly as my Limits will bear,
and as fully, as the matter requires, *Valete & frui mi-*
hi, as follows,

To finde the place of the Sun, for any time, past
or to come.

For ☉

Take one minute, 56 seconds to his place 4 years
before the given time, and the summe is his exact
place for the given time: so you may rise to any year
to come, by this proportionable Addition; and likewise
look back to any Number of years for the time past by
deducting 1 minut, 56 seconds for every 4 years.

To finde the place of the ☾.

Look in an Ephemerides for 12 years before; and
if you would know the place of the Moon for the 1 of
January; see the place of the Moon the 27 of Februa-
ry twelve years before; and add 4 signes, 1 degree,
and 5 minutes to the place of the Moon that 27 of Fe-
bruary, and the total is the place of the Moon on the
1 of January desired. so shall you be sure to have the
Moons place within 8 minutes (when it differs most
from the calcul-tion by Tables) but for the most part,
it will not differ at all: and thus proceed from day to
day out of your old Ephemeris, adding still 4 signes, one
degree, or 12 degrees, 5 minutes, and write it against
the answering dates, & your new Ephemeris succee-
deth.

A Prognostication.

To finde the places of h . 4 . J . S . Q .

For Example, to finde the place of h the 1 of *January* 1669. I take an Ephemerides for 29 years before, viz. for 1640, then compute the distance of h from the *Sun* on the last of *December* in the Ephemerides for this year 1698, and having done this, I run my eye up and down in the Ephemerides 1640. in the beginning of *January*, or else in the end of *December* 1639. till I finde *Saturn* at the same distance from the *Sun* that he is the last of *December* 1668. then I consider his daily motion from that day to the next, and the same I allow him from the last of *December*, to the first of *January* 1669, and so from day to day, allowing him more or less for his daily motion, according as I finde the motion of *Saturn* either increased or diminished in the old Ephemerides, at the same distance from the *Sun*.

for 4 .

To calculate the place of 4 , take an Ephemerides for 12 years before, or for 83 years before, and doe as for *Saturn*, considering the daily motion of *Jupiter* in the old Ephemerides, at the same distance he is that day, that you desire to know his place for.

for J .

To calculate the place of *Mars*, take an Ephemerides for 79 years, and doe in like manner.

Q

For the place of *Venus*, take an Ephemerides for 1 years and do so.

S

Lastly, for the place of *Mercury*, take an Ephemerides for 13 years before, and do so likewise.

Omne bonum eo malum; quod communius.

Questionless much more may be done, to which, I hope, the Ingenious will be prompted on by this Essay.

SAUNDERS, 1669.

Of Eclipses this present year 1669.

Accidit hoc anno Rarum Aliquid; ut scilicet toto terrarum orbe sit eclipsis Luna nulla, propterea; Quod dua coniungunt in Sole, centralibus proxima, Sol enim in prima, est ante Apogaeum, in secunda post illud, paulo longius: quo casuduz Centrales solis in uno semestri possunt contingere. It might seem very strange (but that the Learned Kepler resolves the case, in his Epist. Astron. pag. 881. Reg. 2, & 3.) that there should be two Terrible General Eclipses of the Sun this year, and none of the Moon: the like will be again, on the same reason in the years of grace, 1673, 1680, 1691, 1698. the same will also be verified in the Moon in the years 1678 1682, 1689, 1693 and 1700. in which years there will each years be two total Eclipses of the Moon, and none of the Sun.

The first Eclipse of the Sun this year will be Central, the Center of the Moon, passing the Center of the Sun, and falls on the 20 of April, 22 min. after 5 in the morn. the Sun suffering this Deliquium near the æquinoctial in the 10 degree of γ . This Eclipse will be inconspicuous to us, and chiefly visible in the East-Indies, towards the Æquinoctial Circle, where it will be very terrible to behold, I wish our English ingenious Travelers would make observation thereof, so as to communicate the same.

Europe in general is not concern'd in the effects of this nor the following Eclipse, but onely those particular Countries and Cities, which are under δ , η , θ or ω , or particular persons, who have their Horoscope, med. Coeli; \odot \odot or part of fortune in the 10 degree of any of these signes, and the rather because the last Conjunction of J and S Novemb. 23. 1668. fell in the 10. degree of ω , in perfect square to this Eclipse. Both these solar Eclipses aspecting and affecting the same Angles and signes, and J squaring likewise in θ this September, with many more prodigious aspects towards the latter end of the year, doe as to Countries

A Prognostication.

Most rest on Ireland, her health, Cattle or peace may be herein concern'd, and, I think, the Barbadoes is under this signification. This doth also (according to the learned *Keplers* direction) severely threaten much mischief and evil, to some eminent person of Noble extraction and great Command in the world, by death, sickness, or dangerous disasters about the beginning of September next, and between that and the years end.

The second Eclipse is likewise of the Sun the 11th of October, at 23 min. after 9 at night, the Sun being then under our Horizon will be totally eclipsed to those who inhabire beyond the Equator: and falls in the opposite place of the former, and Quadrates therewith malignity, and evil signification.

In this Eclipse, fiery wrangling Mars doth far exceed in strength and fortitudes, all the other Planets being very weak, or but meanly dignified, as Jupiter and Venus.

Mars Dominum arripiens (ut hic) generaliter est corruptionis ex fervore, proprie inter Homines bella, seditiones intestinas, urbium excidia, tumultus populi, principum, ab his inopinas mortes efficit, (scilicet Origines) With all mischiefs, in whole, or in part, that can be named, to those Countries where the Eclipse is seen, which are herein concern'd, but I told you before they are not seen here.

Of the Four Quarters of the Year.

*Pronaq; cum spectant animalia cetera terram,
Os homini sublime dedit, cœlumque tueri
Fussit, & erectos ad lydera tollere vultus.*

When other Creatures on the ground do pore,
Nature gave man a high erected look,
The Heavens to view, and Deities to adore,
And read the Characters in that fair Book.

Of the Spring.

Equinostium vernale? The Spring Quarter begins when the Sun toucheth the first point of the

quinotial sign *Aries*; which this year is on Tuesday, the ninth of *March*, 11 Hor. 14'. afternoon; equalizing day and night. The natural temper of this season is hor and moist; but if the weather vary & deviate from its proper temper, viz. as to be windy and dry, then it is bad for old people, and child bearing women. If the spring be very wet, expect multiplicity of dangerous Agues the Summer following, with Frenies, Verrigoes, Imposthumes, and the like; but if very wet and warm, with many South winds, its likely to breed dangerous and infectious Diseases. *Melancholy* persons are best in health this quarter; the *Sanguine* the contrary; its good for them to breathe a Vein; those diseases which proceed from excess or putrefaction of blood are most dangerous, but those distempers that have their original from *Melancholy*, are less noxious. Beware of taking Cold, Evening and Morning.

Causas effectibus analogas esse conveniat

In this vernal ingress *Mercury* and *Mars* have chief dominion, and esp cially ♀ who is very potent & qualitatem Aëris variat, & siccitatem adauget saith *Pisat*, pag. 34. *Leop. Albu.* and *Haly*, speak the same, and *Cassandane* adds, *Mercurium facere ventos exitiales*, strong, various and unhealthful winds: & *Mars* quoque significat æstus, incendia, fulgura, grandines, bella, &c. Hor, n- kind weather, unwholesome air, increasing many distempers in mens bodies, especially young people, this might be enlarged from many Authors, but all speak the same sense, *Mars* then being near the earth, not much past his *Perigeon*, and near the 6 house, will infect many places with diseases, proceeding from a hor, infected, and corrupted foul blood but *Mercury* being strong, and well placed, *juvabit pre-nantes facili partu, edentque infantes subito intellectus* &c. gives hopes of safe delivery to women with childe, and apt, and witty children.

The Constitution of Weather you have each day in the Kalender Pages.

A Prognostication.

These three Months following constitute the Vernal Quarter, on which these Observations are necessary.

March.

IN this Moneth of *March*, for your health you may observe that it is good to use pleasant and well Spiced meats, and all things that purge and sweeten the blood, because then the blood stirs, and increaseth in the body: Sharp meats and drinks are to be shunned this Moneth; the pleasant and strongest wine is most commendable; to eat often. Leek pottage is wholsom, to bath oft is commended; not good to purge or bleed much this Moneth. Use to eat often the Herb *Penny-royal*, which heats the stomach, and helps digestion; and in Sauces and Sallets the Herb *Betony* is good, for it clears the sight, and strengthens the head; also *Grains*, *Ginger*, *Nutmegs*, *Galingale*, *Pepper*, and such like Spices be good and wholsome in meat and drink this Month.

April.

In this Moneth the blood increaseth, wherefore to eat pleasant meats, and River Fish, and Sallets often, is commended; to Bleed and Bathe this Moneth very good, to purge the stomach by Potion or otherwise is good, but to eat any kind of *Roots* this Moneth is thought hurtful. All kind of Meat moderately taken, except *Pigg*, is counted good. Its safe to enter into Physick for any grief of the body, but drink moderately; because excessive drinking more contaminates the blood in this Moneth than in any other; to eat *Betony* and *Mints* prepared in *Honey*, and drink first in the morning before you eat any thing, and to drink sometimes the herb of *Grace* in wine is profitable; but beware of eating salt Fish in this month, for it soules the blood, and breeds itches and scabs in the body.

May.

In this month wash often thy face with fair running water, but eat not of such meats as be hot in quality; good to bleed, especially in the feet upon occasion. Beware of eating stale fish, or tainted fish; but eat your meals in due season, and drink but little wine

SAUNDERS, 1669.

this month; to drink clarified Whey simple, or drawn with cool herbs, is very healthful unto hot stomacks: Sharp drinks are good; pure wine mixed with Goats milk to anoint both the head and breast, is greatly commended. Good to take physick; not good to eat the head or foot of any Beast this month; to drink worm-wood-wine is very good, used moderately; but otherwise it attracteth the lightest parts of the humors, and leaves the mass of humors more obstinate; eat Fennel roots tenderly sodden, take gentle physick to purge the blood and body very good, and to sleep moderately after dinner, this month is not discommended.

Of Summer.

When the Summer Quarter is dry, and full of North-winds, and the Autumn succeeding rainy and South winds frequent in it, then expect Coughs, Rheums, Hoarsness, and increase of Consumptions, with great pains in the stomach and head, the winter following. This Quarter is naturally hot and dry; the Flegmatick are best in health; Cholerick the contrary. This season favoureth old age, and debilitates youth. This Quarter takes beginning with us on Friday, *June 11.* at 2. in the morning, causing to us, and all that live on this side the *Aequator*, longest days, and shortest nights. This is called *Summer, Quia tunc plus Solis*, because we have more of the Sun than at other times.

In this Summer Quarter also *Mercury* and *Mars* bear Chief Dominion, especially ♀: the *Sun* and *Jupiter* obtain some dignities in the Rule of this Quarter, which though the season may be hot, yet it will be indifferent seasonable, and diseases will be indifferently moderated the position of the Heavens, favour much the good estate of the Common people.

June.

In this month abstain from such meats as do ingender flegm, and drink then of the pleasantest wine, and drink sometimes fasting, a Cup of *White Wine*, for

A Prognostication.

it purgeth *choler*, and noxious humors from the *Stomack*. Good to eat *Sallers* of *Lettice* prepared with *Vinegar*; eat such meats as be light of digestion; and all this Moneth glut not the *stomack*, but arise from the *Table* with an *appetite*: Arise betimes in the morning, and exercise your body with some long *walk*. You may bleed; beware of eating *milk*, unless the same be well sodden. Take heed of eating *Cheese* and *Apples* this Moneth: Not good to stay long in the *Bath*; to wash the *Feet* this Moneth often in cold *Water*, is commended.

July.

In this Moneth it is not good to eat *strong meats*, nor those which do greatly *nourish*, nor pleasant *spiced meats*, the season being hot. Beware of *bleeding* and *purging*, yet both may safely be done, being guided by discretion. Drink but little *Wine* in this and the moneth following, for that it dries the *stomack* and *liver*, and too much increaseth *choler*; the smallest and weakest drinks are best to be used fasting against *choler*. Abstain from *Venerie*, and use to eat every morning a little *Sage* and *Herbgrace* with a bit of *Bread*. Beware of eating any *muldy Fish* taken with *Net* this Moneth. Use to eat oft *Verjuice* or *Wine-vinegar* with your *Sallers* and *Mear*, for the same doth cool and refresh the body. Refrain eating green *Fruits* this Month. Its wholesomeness anoint the *Neck* and *Breast* with the *Juyce* of *Herbgrace*, *Hysope*, and *Smallage* mixt with *Hony*. If you bath, do it fasting, & very moderately, for to do otherwise is dangerous this Month; & beware of eating either *Broom* or *Lettice* this Moneth, for that they have in them a venomous *poisonous* quality, very noxious to nature. *Gaulick*, *Onions*, *Sage*, and fat *Bacon*, is good for the *Husbandman*, and laborious bodies.

August.

In this Moneth *Choler* with *Melancholy*, *Attends* much increaseth, from whence come lasting *Agues*, and *Fevers* hardly cured. Good to refrain all *immolent*

S A U N D E R S, 1669.

exercise, especially *Venery* this Moneth. Sleep but little in the day time all this Moneth, beware of taking cold, be cautious of Vomir, purge, or bleeding this Moneth. Refrain from *Potherbs* this Moneth, eat no *Cabages*, for they too much ingender *Melancholy*, and cause *Agues*: To eat *Sage* is profitable for the Body. Drink good and pleasant Wine, and eat both *Pullets* and *Veal*, for they much comfort the body, and use oft to eat *Cinnamon* in your meats Our Forefathers were usel to help many Infirmities of the body by anoinring the same with an Ointment made of *Pennyroyal*, *Herbgrace*, *Fennel*, *Smalage*, the seeds of *Hyssop*, *Bay-berries*, and *Allum*, unto which they added *Oyl-olive*, tempering altogether with *Honey*; to eat *Lettice* and all other things that be sold of quality is this Moneth good.

Of Autumn.

Which takes beginning this Year, *Septemb. 12.* on Sunday, 10 min. after 5 in the afternoon, the Sun then entring the first scruple of *Libra*, producing the second *Æquinox* to all on this side the *Polar Circle*. It is called *Autumn* from *Angeo, quia tunc fruges augentur*. This season is by nature cold and dry; therefore the *Sanguine* are now best in health, and the *Melancholy* subject to distempers; best for youth, but worst for age: When this season hath frequent North winds, and is dry, then are men and women of moist *Flegmatick* constitutions, best in health; but persons of other constitutions, are subject to *Fevers* and other distempers incident to their nature. *Mercury* is again in this Autumnal Quarter most strong: certainly this year will be prosperous for *Ingenuity*, and the bringing to perfection ingenious contrivances, *Mars* is very weak, but the ♂ and ♀ are fortified though *Saturn* be retrograde yet he is in the 12 house where he doth less hurt, the sweet rayes of *Venus* may cause sweet a r, after some fogs.

September.

In this Moneth eat all manner of meats and fruits that

A Prognostication

that your stomach desires, for all things are now in their proper vigor and perfection. Good to purge, and to this end is highly commendable the flour of *Casse* new drawn, that gently purgeth and comforts nature, and use cordial powders in your broths; these preserve the body sound till the next Spring. All *Simples*, *Roots*, *Fruits* and *Seeds*, may be well applied this Moneth, and used on all occasions, as being in their full perfection; *Goats milk* and *Pomegranats* eaten this Moneth are commendable, for that they both increase blood, and cause a good colour.

October.

In this Moneth doth the Body wax dry, and the Brain moist; therefore it becometh to eat roasted meats often in this Moneth, and drink pleasant Wine, also drink new Wine, and eat pleasant meat often; Goats milk is held to be excellent good for this Moneth, because it purifieth the blood, and cleaseth the Lungs; its good to eat often *Appletarts* prepared with comfortable Spices and Sugar, for they comfort greatly the stomach; but wash not the head in this Moneth. Let Blood and Purge as occasion requires; beware of eating too liberally of new Fruits; to eat the *Rhadiſh* root is wholesome, and to eat *Mustard* with your meats, is very commendable; all wild Fowls this Moneth are wholesome and good, and Cloves with Cinnamon in meats, sauce, drinks, or champed in the mouth, are very good.

November.

In this month Melancholy much increaseth, & blood decreaseth; its good to vomit sometimes. Eggs and honey now are very wholesom. Salt powdred meats are good; this is the most perillous time in the Year to Bathe in, for the Blood is most restrain'd within the Arteries, and sweating either in Baths or Hot-houses, (for what is spoken of one, is to be understood of the other) stirs up the humors, and provokes distillations from the head, causeth dimness of sight, and pains in the eyes and head. This Moneth you may purge or bleed as

need requires; the eating of *Honey* this Moneth, Pulse, and Goats Milk, are very wholesome, and profitable to the body, for that they increase blood, and cause a good colour; and *Cinnamon* and *Ginger* drunk often this Moneth, give health, and are commendable, and beware you go not early forth of doors this Moneth, (those that can avoid it) because of Fogs and Mists which greatly offend the Head and stomach, but let the Sun have first some power on the Horizon. In this Quarter *Mercury* hath wholly lost his Dominion intimating; a stupidious dulness of the Animal faculties (like the dull drouzy weather) possesseth men; *Saturn* hath chief dominion in this Quarter, and *Mars* next indignities, *Venus* and *Jupiter*, are meanly fortified, it will bring cold and snow, which will be well moderated by *Mars*, *Venus* and *Jupiter*, and produce Frost; not dry and healthful, kind winterly weather: So that this Quarter will end well the old year, and indifferently well begin the new.

Of Winter.

This Quarter takes beginning this Year on Saturday, the eleventh of December near five in the morning; then the Sun enters the first scruple of the Tropical sign *Capricorn*, forming shortest days to us and all on this side the Equator.

The Natural Temperament of this Quarter is Cold and Moist; from hence it is, that youth and cholerick people are in best health; but aged and flegmatick constitutions are most distempered. If the Winter be dry, and much aboured with South Winds without Frost, it creatch pains in the Brest, costiveness in the Belly stopping of Urine, with sharpness, exulcerations, and inflammations. If it be over long Frost, with little or no snow, it is a forerunner of a Plague the Summer following, as I hinted before.

The next Three Moneths, December, January, and February constitute the following Quarter.

Decemb.

December.

In this Moneth Melancholy and Phlegm much increase, which are heavy, dull, and cold; and therefore it behoves all that will consider their healths, to keep their heads and bodies very well from cold, and to eat such things as be of a hot quality. Broth made of *Eggs*, *Morts* and *Onions* are good, *Cabbage* is very good, roasted *Onions* of themselves, or in sauce very good, roasted *Apples* or *Pears* after meats are greatly commended; the flesh of *Weathers*, *Rams* and *Goats*, excellent food; *Capons* and all manner of *Land fowl* very wholesome, but no *Water fowl*. Bleed but little, and for necessity for in no Moneth in the Year the Body hath less Blood then now. Go not out of the house in the night, (unless necessity constrain) for the moist air of the night doth much harm the Body, *Parsly* *Roots* tenderly sodden, much comfort the Stomack. All the Moneth *Cows* and *Swines* flesh is to be avoided, as being over moist for the Body, and unwholsom food; and drink often *Wine* this Moneth. And *Honey*, *Cinnamon*, *Mace*, *Nutmegs*, *Ginger*, *Grains*, *Glives*, *Galingale*, and such like, often drunk or eaten in this Month, do cherish the Blood, the Heart, and all the Body.

January.

In this Moneth abstain from bleeding as much as may be, and beware you take not cold after bleeding. If necessity compel, walk not abroad in the night. Use to eat the best Confections, and to drink often *White Wine* in this Moneth, because *Flegm* is very predominant. And to fast long, is very hurtful to the Body, but to eat *Winter Sallets* well prepared with *Oyl* and *Spices*, is much commended. A *Bath* or *Hot-house* is good; and to take *Vomits* is not hurtful; also take once every morning (throughout this Moneth) for three hours before dinner, a little quantity of *Honey* of *Roses*, for that the same doth much comfort the Stomack, and cleanse the body of choler and flegm. And to drink

SAUNDERS, 1669.

also these Spices with either Wine or Ale, as Grains, Ginger, Nutmegs, Cloves, and such like, are greatly commended this Moneth.

February.

In this Moneth use to eat Confections candied with Honey, for that they purge the Body; to eat Apples is commendable; but to eat often fresh Beef, or other meats that be moist, or to eat any Pot-herbs, except Parsly and Smallage, is thought hurtful; and oftner eat boiled meat then roasted this Moneth, because the same doth keep the Body seduble. Baths, Stones, to take Positions, and Bleed, are not hurtful. You may safely take Pills in this Moneth to purge the Head, such as are necessary, because the Head is more grieved, pained, dull, and heavy in this Moneth, then any other time of the Year; and to eat Honey with Bread in this Moneth, is much commended, for that the same doth both purge the Brest and Bladder.

These considerations I thought necessary to add, because they may benefit many, and can hurt none; for, in a right Regiment of Diet and Order, consists our natural well-being.

Astrological Elections of Times, briefly, yet fully, and safely directing the right Administration of Physick and Iblestomy.

Times of the Year.

Spring good, Harvest indifferent.

Time of the Day.

Morning, after Sun rising, fasting; afternoon after perfect digestion, the air temperate, the wind not south.

Non

A Prognostication.

Not good to bleed

At the *change* of the Moon, nor two days before
after; ☿ ☿ or ☐ of ♄ ♄ forbiddeth the opening
of a vein for 12 hours before, and 10 hours after; ☿
the Moon with the Dragons head or tail, and the ☐
or ☐ of the Moon to ♄ or ♄ forbids to bleed a day
fore or after; ♀ combust not good.

Good to let blood

The ☾ in ☿ * or △ or within the rays of ♄ and
when the Sun shall be in △ or * with ♄ or ♀ when
and ♀ aspect each other with △ or *, or be in ☐
likewise when ♄ and ♄ shall radiate themselves by
or * aspects of the ☾ to ♄ and ♄ are not hurtfull.

♀ being fortunate, and not afflicted, his aspect
good; hurtfull, if contrary.

The ☾ void of course forbids not the letting of blood.

Directions after Bleeding.

Sleep not presently, stir not violently,

Use not Venery, feed thou warily.

Notwithstanding, for the *Phrensie*, the *Pestilence*,
Squinancy, the *Plurisie*, the *Apoplexie*, a continual
Hæmorrhach, growing of *Choler* and *Blood*, a hot burning
or any other extream pain, in this case a man may
tarry a chosen time, but incontinently with all con-
venient speed he is to seek and use his remedy, as if a
sen time might be respected.
